

## Attention Anglers of Indian Lake April 2019

If you intend to fish Indian Lake, be advised that the fishery is limited at the present time. Dane County and Wisconsin Department of Natural Resources (WDNR) treated the lake in October 2019 to eliminate carp. Small yearling bass and bluegills were stocked after the treatment. Additional stocking this spring included adult bluegill, yellow perch and channel catfish. Later this fall, Largemouth Bass fingerlings will also be stocked.

Patrons are more than welcome to fish but should know that the fishery is restricted in both numbers and size of fish species. Also, Indian Lake has special size and bag restrictions so please see current WDNR regulations. As always, it is illegal to move live fish from one waterbody to another or stock fish without a permit. This helps reduce the risk of introducing disease or invasive species.
