

Door Creek Watershed Bike Loop

Not all roads are labeled. Interactive maps and additional watershed details are available on: <https://olw-lwrd.countyofdane.com/DoorCreekBike>

About the Watershed

Door Creek flows into Lake Kegonsa, the most southern of the Yahara River chain of lakes. The land that drains to the creek is called its **watershed**. Everything that happens on the land impacts the quality of the water. The creek currently suffers from silty stream beds and high nutrient loads from the surrounding landscape. During the summer months, these nutrients feed blue-green algae and nuisance aquatic plants in Lake Kegonsa. The Dane County Land and Water Resources Department has developed a watershed management plan for Door Creek with the goal of improving water quality.

About the Route

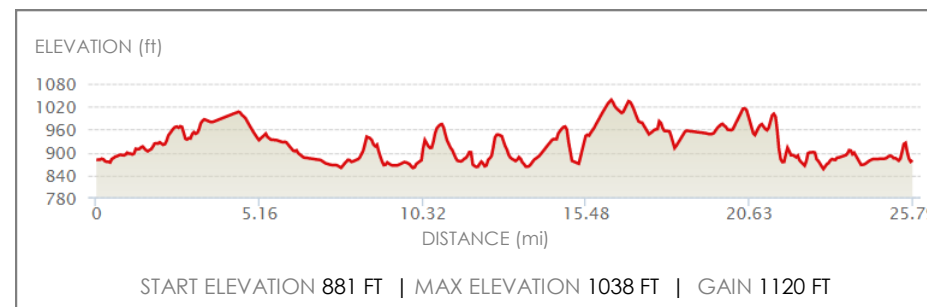

This route will take you nearly 26 miles, starting in the watershed's urban area and then traveling through scenic rolling agricultural landscapes in the drumlin-marsh area of eastern Dane County.

Tell us what you think!

Send us route feedback using the link survey link below:
